

Erratum to

“Generalizations of generating functions for hypergeometric orthogonal polynomials with definite integrals” in Journal of Mathematical Analysis and Applications, **407**, 2, 2013, November 15, 211-225, by Howard S. Cohl, Connor MacKenzie and Hans Volkmer

Concerning 1–3, even though the normalization integral (7) is not strictly defined for $\alpha, \beta \in (-1, 0)$ such that $\alpha + \beta + 1 = 0$, the only time this occurs is for $n = 0$. In that case we can write $(\alpha + \beta + 1)\Gamma(\alpha + \beta + 1) = \Gamma(\alpha + \beta + 2)$ which is well defined for these values. Therefore we can relax this restriction.

1. p. 213, line 5.
Remove “such that if $\alpha, \beta \in (-1, 0)$ then $\alpha + \beta + 1 \neq 0$ ”
2. p. 213, Theorem 1,
